The NIEHS Peer Reviewers Upgraded Seven Cancer Conclusions in the NTP Study

"I have more questions than answers, but the heart is clearly sending a signal in the rat studies, between the levels of cardiomyopathy [heart disease] and malignant tumors," said scientist Rick Adler in this MN report that explores historical controls and the non linear effects in the NTP study.

"These results suggest that exposure to RFR has the potential to induce measurable DNA damage ..." states the National Toxicology Program Scientists.

"DNA damage was significantly increased in the frontal cortex of male mice, peripheral leukocytes of female mice, and hippocampus of male rats ..." See the full official presentation by National Institutes of Environmental Health Sciences NTP on the DNA damage found in the NTP study.
