

PROTECT THE BIRDS

A photograph of two white storks with long red beaks nesting on a cell tower antenna array. The tower is covered in a dense nest of dry sticks and twigs. The background is a clear blue sky with some light clouds. The tower structure is metallic and has several large white circular antennas attached to it.

Growing science links bird exposure to cell tower and wireless radiation to impacts on:

- Nesting
- Oxidative stress
- Reproduction

Current policies for cell tower radiation ignore risks to wildlife.

Safeguards are urgently needed.
