

Worldwide Awareness That 5G Cell Tower Safety is Not Assured

US Government Accountability Report on 5G

"...no studies have been carried out on the long-term health effects..."

"the long-term health effects on people, if any, may not be known for many years later because some health outcomes could take decades to develop."

November 24, 2020

The US GAO quietly released a new report on 5G fully omitting the science showing harm and the hundreds of scientists calling to put a halt to 5G. Yet the Report does caution that research on long-term health effects has not been done and states that the FDA review is not a comprehensive review of all health effects. [READ MORE](#)

A Cautionary Tale from the California Firefighters

After research found brain damage connected to cell towers on their fire stations, firefighters successfully lobbied to halt cell antennas on their stations. Susan Foster tells the story of the California firefighters' battle to protect their minds and bodies.

EMFs and Insects: 72 of 83 Peer Reviewed Studies Find Effects

A report by environmental organizations on the "biological effects of electromagnetic fields on insects" by high voltage, mobile communications and WLAN comes to the conclusion that, in addition to pesticides and the loss of habitats, mobile communications radiation also has negative effects on insects.

New Science To Copy, Paste and Share

Each title is hyperlinked to the study online so you can cut, paste and share. This is just a small sampling of recent publications.

Is the Increasing Incidence of Thyroid Cancer in the Nordic Countries Caused by Use of Mobile Phones?

"The incidence of thyroid cancer is increasing in many countries...We postulate that RF radiation is a causative factor for the increasing thyroid cancer incidence."

Exposure to radio frequency radiation increases the risk of breast cancer: A systematic review and meta-analysis.

"radiofrequency radiation exposure significantly increased the risk of breast cancer, especially in women aged ≥ 50 years and in individuals who used electric appliances, such as mobile phones and computers."

Impact of non-ionizing electromagnetic radiation on male infertility: An assessment of the mechanism and consequences

A detailed literature review suggesting oxidative stress from EMFs as a key pathway of action for harm to reproductive organs.

Radio frequency Electromagnetic Fields from Mobile Communication: Description of Modeled Dose in Brain Regions and the Body in European Children and Adolescents.

Voice calls on 2G was the largest contributor to RF dose in brain and whole-body doses were mostly determined by tablet and laptop use. Children's and adolescents' temporal lobes and frontal lobes received more RF dose than all other regions of the brain.

Note: There is so much *new science* and *5G news* to share that EHT has a second newsletter coming out next week with more science and more policy efforts. We are thankful for all your support.

Schools

New Hampshire Commission: Replace Wi-Fi with Hardwired Technology

The majority of the New Hampshire Commission has voted to replace wireless technology with safer technology in schools and libraries.
