

Major Exposé Outlines Industry Ties Among Telecom, Government, Scientists, and International Agencies

The Washington Spectator has published **a major exposé** by investigative journalist Barbara Koeppel on industry influence into the science and policy of 5G and wireless radiation.

Koeppel's investigation follows the money. She details industry ties between the Food and Drug Administration (FDA), The Center for Disease Control and Prevention (CDC), the International Commission on Non-Ionizing Radiation Protection, (ICNIRP), The New York Times, the American Cancer Society, and scientists professing that 5G is safe.

Please share this **investigation** with your elected officials, friends and family.

“The industry is spectacularly successful in ensuring that its message echoes far and wide: its profoundly deep pockets purchase seats at all the right tables in the global and national watchdog agencies, media organizations, and scientific associations — which manage the misinformation. Thus, industry's billions decide which scientists and studies get funded or defunded, which get quoted or discredited, which agency commissioners bounce back and forth from telecom companies and corporate law firms, and how dissenters — such as U.S. states and cities — are sued and usually silenced.

Barbara Koeppel, "Wireless Hazards," Dec. 28, 2020

The WASHINGTON
SPECTATOR

Koeppel's 7,000-word report features numerous US and international scientists and experts discussing corporate power's influence on scientific discourse and reveals stunning ties between global telecommunications companies and federal agencies.

Koeppel presents the research of EHT president Devra Davis PhD, MPH and Om Gandhi Sc.D., Electrical Engineering, on children's unique vulnerability to wireless radiation. She also cites the

investigation by EHT into the CDC's website pages on wearables and non-ionizing radiation, which found that several pages were drafted in consultation with an industry-tied consultant.
