## The Miseducation of America on 5G: The New York Times Gets It Spectacularly Wrong

EHT responds to the New York Times point by point.

"When William J. Broad, a Pulitzer-Prize winning New York Times science writer, strangely mangles information on the dangers of 5G, this plays right into the hands of those determined to advance this never-tested technology without serious examination of its long-term impact on human health and the environment.

The recent headline of the NYTimes trumpeted 5G as the "health hazard that isn't." Not so fast. A close examination of claims in that article indicates that it is time for a reset on the march to the latest wireless technology as the consequences could not be more monumental."

Devra Davis, PhD, MPH, President and Theodora Scarato, MSW, Executive Director, Environmental Health Trust document the ten corrections needed for William J. Broad's "The 5G Health Hazard That Isn't" published in the New York Times July 16, 2019.
