A National Academy of Sciences report finds "directed, pulsed radiofrequency energy" is the "most plausible mechanism" to explain diplomats' illnesses.

*Cell phones and Wi-Fi emit pulsed radiofrequency.*

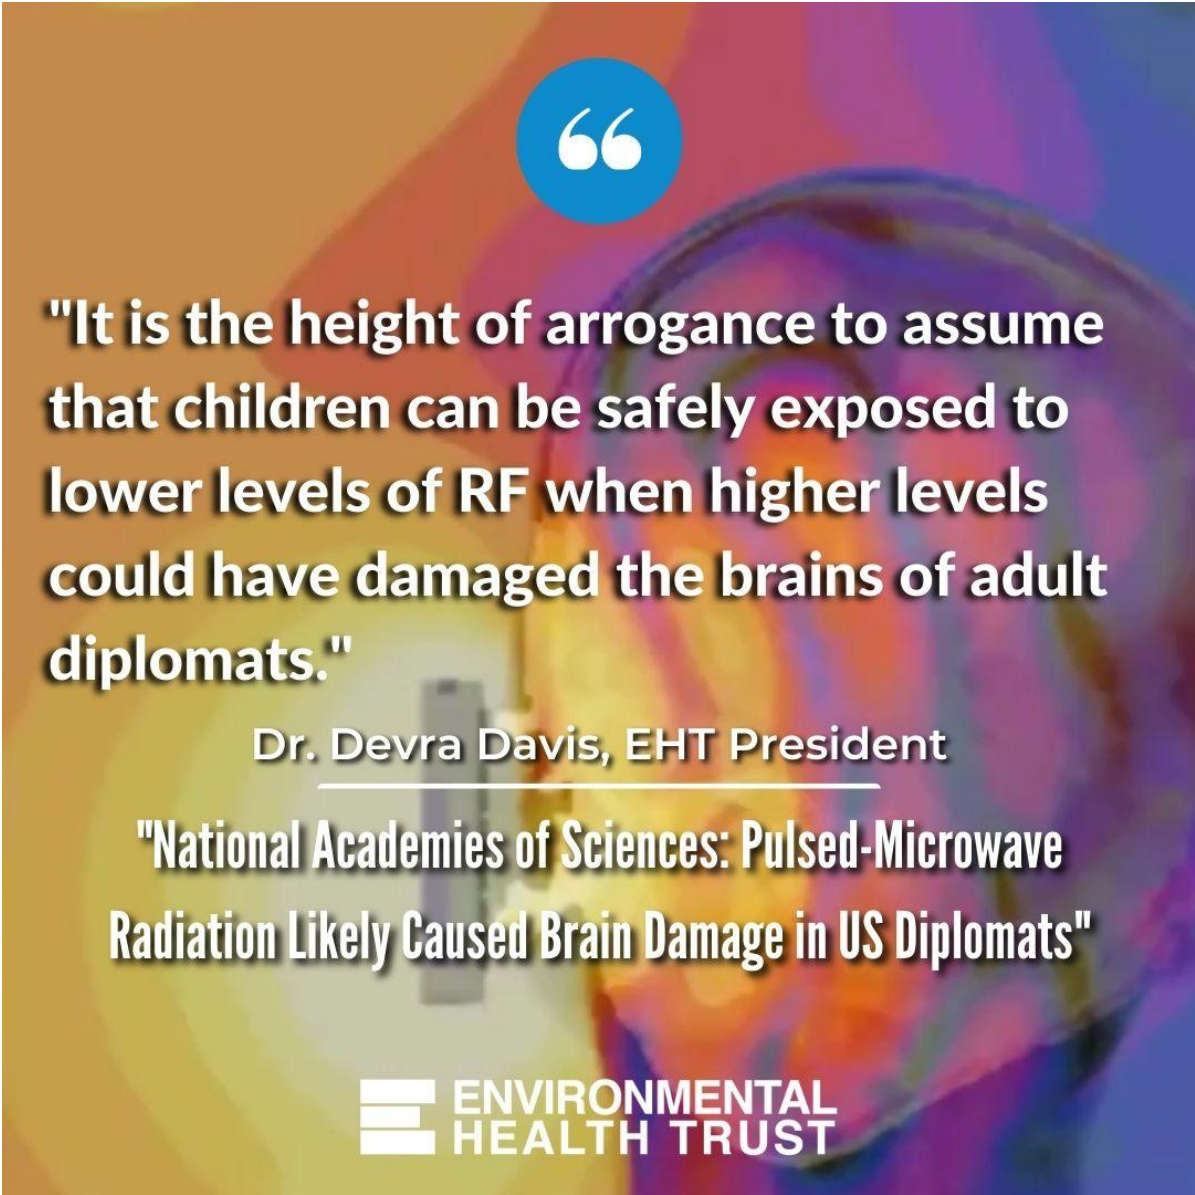

What does that mean for our children's health?

[Read the Article](#)

In case you missed it, one of the most influential scientific societies in the world concluded in a report commissioned by the U.S. State Department that the “mysterious illnesses experienced by U.S. diplomats in Cuba and China “are consistent with the effects of directed, pulsed radiofrequency (RF) energy [microwave radiation].”

The NAS report does not speculate on the source of the pulsed electromagnetic weapons against American and Canadian diplomats but the conclusions make clear — the same microwave frequencies that are used in cell phones and Wi-Fi that could be used in brain-damaging weapons.

If microwave frequencies can deliberately be used to cause brain damage, how can we conclude that RFR exposure from wireless connectivity is harmless to our children!

**"It is the height of arrogance to assume that children can be safely exposed to lower levels of RF when higher levels could have damaged the brains of adult diplomats."**

**Dr. Devra Davis, EHT President**

**"National Academies of Sciences: Pulsed-Microwave Radiation Likely Caused Brain Damage in US Diplomats"**

 **ENVIRONMENTAL  
HEALTH TRUST**

**Read Davis' analysis of the implications resulting from the NAS report's conclusions.**

"Our children need toys and tools to grow and learn, not those that could permanently harm them," Davis writes.
